R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
summary(cars)
```

```
##      speed      dist
##  Min.   : 4.0    Min.   :  2.00
##  1st Qu.:12.0    1st Qu.: 26.00
##  Median :15.0    Median : 36.00
##  Mean   :15.4    Mean   : 42.98
##  3rd Qu.:19.0    3rd Qu.: 56.00
##  Max.   :25.0    Max.   :120.00
```

Including Plots

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.

#a.Show your solutions on how to import a csv file into the environment.

```
mpg <- read.csv("mpg.csv")
mpg
```

a. Plot using `geom_bar()` using the top 20 observations only. The graphs should have a title, labels and colors. Show code and results.

```
ggplot(carNum, aes(x = model, y = count)) +
  geom_bar(stat = "identity", fill = "yellow", color = "darkred") +
  labs(title = "Top 20 Observations", x = "Model", y = "Count of Cars")
```

#b. Plot using the `geom_bar()` + `coord_flip()` just like what is shown below. Show codes and its result.

```
ggplot(carNum, aes(x = model, y = count)) +
  geom_bar(stat = "identity", fill = "yellow", color = "darkred") +
  labs(title = "Top 20 Observations", x = "Model", y = "Number of Cars") +
  coord_flip()

#5. Plot the relationship between cyl - number of cylinders and displ - engine displacement using `geom_point` with aesthetic color = engine displacement. Title should be "Relationship between No. of Cylinders and Engine Displacement". a. How would you describe its relationship? Show the codes and its result.

```
library("ggplot2")
ggplot(mpg, aes(x = displ, y = cyl, color = displ)) + geom_point(size = 3) + labs(title = "Relationship between No. of Cylinders and Engine Displacement",
  x = "Number of Cylinders (cyl)",
  y = "Engine Displacement (displ)")
```

#6. Plot the relationship between displ (engine displacement) and hwy(highway miles per gallon). Mapped it with a continuous variable you have identified in #1-c. What is its result? Why it produced such output?

```
ggplot(mpg, aes(x = displ, y = hwy, color = cyl)) +
  geom_point(size = 3) +
  labs(title = "Relationship between engine displacement and Highway MPG",
        x = "Engine Displacement (displ)",
        y = "Highway MPG (hwy)")
